

E-Pacer

Zero-lift transfers: The E-Pacer can perform the sit-to-stand transfer that is part of every gait training session with no lifting on the part of the caregiver.

Gait training with extra stability: The E-Pacer's strong and rigid frame gives security for heavier or taller clients.

Expandable legs: Widen the base legs for clients needing extra step width or to get up close to a wheelchair prior to a transfer.

Height range: The 66cm adjustment range of the E-Pacer's electric lift column provides great versatility for use with clients of different statures.

Built-in scale: the optional Bluetooth-equipped scale and new Gait Tracker mobile app measure the load on the body support, allowing caregivers to track a client's weight-bearing progress over time.

Switch-pole: Lets the caregiver operate the lift without bending down or turn it around to give the client control of the lift.
