

Jenx Prone Stander

Dedicated to assisted prone standing with the child supported at the front, the Jenx Prone Stander offers a continuous range of angles so the optimum position for each child can be achieved.

Upright/Prone Standing System

Complete configured package contains the main accessories required, including knee blocks, sandals, and a tray with a bowl.

The length of the Prone Stander is continuously adjustable, not incrementally, which offers every child just the right length to support them as they stand

Can be angled from 0° to 40° giving it a wide range of choice for how you would like your child to be angled while standing

Adjustable hip and chest pads, supports adjust in height and angle, as well as the distance apart from each other

Standard configuration

- Angle-adjustable frame
- Hip and chest pads
- Knee blocks
- Sandals
- Tray with bowl

Can be angled from 0° to 40°

The supports are fully adjustable and are made with polyurethane.

Flexible PU Knee Blocks complete with padded knee straps

DAYTON'S STORY

Dayton is 7½ and has contractures causing a loss of range of motion in his knees and ankles and has tight hamstrings and calf muscles. He also has a condition in which the femoral neck leans further forward than the rest of the femur, causing the lower extremity on the affected side to rotate internally, for example, the knee and foot twisting towards the midline of the body. He has no hip subluxation, meaning there is no partial dislocation in his hips. He has mild scoliosis to the right of his body, and his Gross Motor Function Measure is measuring at level four.

As Dayton is a non-walker, the regular standing provided with the Prone Stander has had huge benefits for him. These include the weight bearing activity, which increases his bone density and improves circulation. There is prolonged stretching on the muscles which will prevent his contractures from getting worse and it will improve digestion, bladder and bowel function.
